### Comfortable

Comfort is the most irrefutable reason to consider the KHart Panels system in your home. With radiant heat, temperatures are higher at floor level keeping you warmer. And when your feet are warm, you feel warmer all over. The KHart Panels are installed throughout the entire floor surface, so there are no hot spots. Radiant heat puts the heat where the occupants are, not at the ceiling, like conventional systems do.

### Clean & Healthy

The KHart Panels Radiant heating system does not dehumidify the air, so in the winter, room humidity is ideal. Unlike forced air, radiant heat will not dry out you or your furniture. Without fans or blowers, radiant is dust-free, so it's also cleaner than conventional heating systems. Virus particles, bacteria and pet dander fall to the floor, for easy cleanup rather than circulating constantly in the air, so your family will stay healthier in the colder months.

### Loop Layouts

Have a project in mind? **KHART PANELS MARKETING LLC** can provide you with a loop layout for your radiant heating project from your plans emailed in CAD 2000 or DWG format to [sales@khartpanels.com](mailto:sales@khartpanels.com)

## **KHART PANELS ADVANTAGES**

- KHart Panels provides comfortable heating that can warm your entire home starting from the floors.
- Radiant heat is efficient and offers homeowners energy savings ranging from 25% to 50% off of your conventional heating bill.
- Radiant heating provides floors that are significantly more comfortable than traditional heating systems. Cold drafty rooms do not exist in a radiant home.
- Because of our proprietary design and sheer volume KHart Panels is able to provide a superior product at competitive prices that have never been available in the industry.
- KHart Panels has been designed by a team of engineers and flooring experts that address the issues that come up during installation.
- With our unique process we can now offer all families an affordable heating system that was previously only available to the super luxury market.
- U.S. Patent No. 7,832,159
- Additional Patents Pending
